

Management skills to improve livestock farming productivity through animal wellness

Estimated reading time: 9 minute(s)

Livestock farming is frequently considered hectic especially if one is dealing with a variety of animals in his/her farm.

Past are the days where farmers used to stroll around with a pen and a piece of paper to take data and information concerning the animals being reared.

A paper record keeping system is always a good place to start; it's simple and low cost. However, there are disadvantages.

Papers can get lost, a spilled cup of coffee can have a disastrous effect, and you generally can't utilize a paper record keeping system when you're out working with your animals.

Today if one intends to run a livestock farming business, it is advisable to **abandon the traditional manual method of operating a farm** and invest in **suitable modern software** such as the online **Farm4Trade [Farm Management Application](#)**.

Various livestock farmers have currently incorporated this livestock managing software as their **record keeping tool** to keep up with current trends as well as to remain competitive.

An electronic record keeping system has the benefits of being hosted in the cloud for **accessibility on your smartphone**, and can be accessed by multiple farm managers if needed with its **customizable options**.
